

I. IDENTIFICATION DATA

Thesis title:	Transfer learning for cloud semantic segmentation on satellite imagery
Author's name:	Bc. Matěj Klimeš
Type of thesis :	master
Faculty/Institute:	Faculty of Civil Engineering (FCE)
Department:	Department of Geomatics
Thesis reviewer:	Ing. Ondřej Pešek, Ph.D.
Reviewer's department:	Department of Geomatics

II. EVALUATION OF INDIVIDUAL CRITERIA

Assignment	extraordinarily challenging
<i>How demanding was the assigned project?</i>	
The study programme the student has attended offered overall only one course dealing with machine learning. Furthermore, the subject was taught in the period of the student's foreign studies. It means that the student had to undertake a great deal of additional studies to achieve a sufficient level of knowledge and expertise. Therefore, I consider the assignment extraordinarily challenging.	

Fulfilment of assignment	fulfilled
<i>How well does the thesis fulfil the assigned task? Have the primary goals been achieved? Which assigned tasks have been incompletely covered, and which parts of the thesis are overextended? Justify your answer.</i>	
The thesis fulfills the assigned task without any omission. Furthermore, the extent of the transfer learning experiments was delivered in a magnitude unforeseen.	

Activity and independence when creating final thesis	A - excellent.
<i>Assess whether the student had a positive approach, whether the time limits were met, whether the conception was regularly consulted and whether the student was well prepared for the consultations. Assess the student's ability to work independently.</i>	
The student had a positive approach and reflected the high demands of the thesis by starting the works early in order to be sufficiently ahead of time. The conception was regularly consulted with the student being well prepared and providing the questions for the meetings in advance. The student was able to work independently.	

Technical level	A - excellent.
<i>Is the thesis technically sound? How well did the student employ expertise in his/her field of study? Does the student explain clearly what he/she has done?</i>	
To put it slightly tautologically, the thesis sounds as technical as a thesis. The student employed expertise in his field of study and explained clearly what he has done.	

Formal level and language level, scope of thesis

A - excellent.

Are formalisms and notations used properly? Is the thesis organized in a logical way? Is the thesis sufficiently extensive? Is the thesis well-presented? Is the language clear and understandable? Is the English satisfactory?

Formalisms and notations are used properly and the thesis is organised in a logical way while being sufficiently extensive. The thesis is typed using LaTeX – I consider it not only well-presented but above the average level of thesis created at the student's study programme. As much as the supervisor can judge, the level of English is satisfactory with the language being clear and understandable.

Selection of sources, citation correctness

A - excellent.

Does the thesis make adequate reference to earlier work on the topic? Was the selection of sources adequate? Is the student's original work clearly distinguished from earlier work in the field? Do the bibliographic citations meet the standards?

The thesis makes adequate reference to earlier work on the topic. The selection of sources is adequate and the bibliographic citations meet the standards. The student's work can be clearly distinguished from earlier work in the field.

Additional commentary and evaluation (optional)

Comment on the overall quality of the thesis, its novelty and its impact on the field, its strengths and weaknesses, the utility of the solution that is presented, the theoretical/formal level, the student's skillfulness, etc.

No additional comments.

III. OVERALL EVALUATION, QUESTIONS FOR THE PRESENTATION AND DEFENSE OF THE THESIS, SUGGESTED GRADE

Summarize your opinion on the thesis and explain your final grading.

Old men tend to yell at clouds. Young men tend not to care about them. Aristophanes tended to ask: "How can I study from below, that which is above?" A scientific mind climbs the celestial calvary up and tries to describe them. Derive from them. Deduce. Disperse. Dispel the doubts. Detect, determine, diagnose, and discern. And in the end, demonstrate them as the definitive discoveries. The clouds carry in their loins the thunder and lightning, the sovereign powers of the arising scientific manifestation. Matěj Klimeš guides us up a rope to grasp the bolt.

The grade that I award for the thesis is **A - excellent**.
